Carefully examine the crate(s) for damage before opening. If the carton is damaged, immediately notify shipping company. Open the carton(s) and remove all protective packaging. Retain the shipping carton(s) until the unit(s) is installed and properly operating. TMI, LLC is not responsible for delayed or late claims.

Read and Save These Instructions

Please read the “READ THIS FIRST” note on the front cover of this manual before proceeding.

IMPORTANT NOTE

If the Screen-Pro was ordered with optional electrical components and accessories (door switch, control panels, mounting brackets, etc), the accessories may be found in an additional box. Check all of the boxes before disposing.

TYPES OF DOORS

There are a variety of doors used at both industrial and commercial facilities. Each has its specific opening/closing mechanism. This Screen-Pro unit has been shipped with hardware to accommodate a Stand-Off Mounting Method. It should be mounted in front of any rails or guide tracks and centered on the doorway opening. Also, the Screen-Pro guide tracks should be on the outside of any rails or tracks used with the security (regular) door.

SCREEN-PRO COMPONENTS

REQUIRED TOOLS

It is recommended that two people install the door together.

The following tools will be needed for installation:

- Carpenter’s Level (Min. 4’ Length)
- Carpenter’s Square
- Hammer Drill
- Masonry Drill Bit
  (For 3/8” Diameter Anchors)
- 3/8” Diameter and Various Wall Anchors
- Assorted Shim Stock
- Socket and Wrench Set
- Hand Tools
- Four Bar Clamps (36” Long)
- Two Ladders
- Forklift (Supplied by Dealer or Customer)
**STEP 1**
Lay the basic components in front of the doorway opening.

**STEP 2**
Slide the Brush Seals into the edge groove of each Brush Seal Retainers Bars.
- **A.** 2" Brush goes into 1" (45°) Retainer
- **B.** 3" Brush goes into 2" Straight Retainer

**STEP 3**
Using work horses will make the assembly process easier although it is not essential. Place the Guide Tracks on the horses with the Guide Flare Plate facing up.

**IMPORTANT**
The Guide Track Flare Plate ships flat and must be bent out 1 1/2" before any assembling takes place.

**NOTE:** There is a left and a right Guide Track.

**STEP 4**
Slide each Side Screen into the groove that is at the bottom outside edge of the Track Guides.
STEP 5

Slide the Bracket Anchor Plates into the guide channel that is on the outside edge of the Track Guides. There are 10 Anchor Plates, 5 for each side on a 10' high door.

NOTE: Do not place Flange Nut on bottom Anchor Plate until the Floor Anchor Angle is in place, Step 7.

STEP 6

NOTE: Most Projection Brackets have a slot for adjusting the Screen-Pro Door forward or backward. Depending on the specific application, it might be necessary to cut and re-drill the brackets so the Brush Seal can be their most effective.

Place a Projection Bracket on each Bracket Anchor Plate. The top and bottom braces have 2 slots. All 5 slots must be used. IMPORTANT: The Wall Mounting Lip should be facing outward. The top edge of the Top Projection Bracket should be mounted 8" from the top of the Guide Track. The bottom edge of the Bottom Bracket should be even with the bottom of the track and the single slotted brace should be centered on the Guide Track.

Place a Flange Nut on each Bracket Anchor Plate to secure the Bracket and hand tighten. Use a square to make sure that each Projection Bracket is perpendicular to the Guide Track. Then tighten with a wrench.

STEP 7

Next, attach a Floor Anchor Bracket to the bottom of each Guide Track using the Bracket Anchor Plate. Place the oval hole over the bolt and tighten with a flange nut. The Floor Anchor Bracket should be at right angles with the Track Brace and flush with the bottom of the Guide Track.
STEP 8

Attach the Top Spreader to the top of the Guide Track using the Spreader Mounting Bracket. Make sure the back of the Spreader Angle is facing down and toward the wall. Place the Retainer Bar that has the 2" Brush Seal attached on top of the Spreader with the brush facing toward the screen door. Then place the Retainer Bar with the 3" Brush Seal on top of the 2" Brush Bar facing the existing door. Use 2 bolts and flange nuts on each side to secure all the components.

Use the supplied Self-Tapping Sheet Metal Screws to attach the Brush Retainer Bars.

STEP 9

Attach the Drum Brackets to the top of each Track Guide using 5/16" x 1-1/4" bolts with flange nuts. The “C” Bracket (motor side) goes on the left and the round cradle (bearing side) is on the right unless ordered differently.

IMPORTANT: Use the bottom hole of each set of holes.

STEP 10

Using a helper, swing the assembly into place and center on the doorway opening. The bottom of Guide Tracks should be on the floor and the wall mounting holes on each Projection Bracket should be flush against the wall.
STEP 11

Once the assembly is centered, make sure that each Guide Track is plumb. Then mark the Projection Bracket mounting holes.

Remove assembly and drill all 10 holes. If you are mounting to a concrete wall or concrete block, wall, anchors will be necessary (not supplied).

Replace the assembly and align all the mounting holes. Fasten the unit to the wall using appropriate fasteners for the mounting surface.

IMPORTANT: DO NOT mark or drill the Floor Anchor Bracket mounting holes. That is Step 16, Page 8.

STEP 12

The assembly might need to be moved toward the wall. The distance is determined by the space needed for any door handle(s) that are attached to the security door. First, slightly loosen all Bracket Anchor Plate Nuts. Then run the security door up the rail to make sure the handle(s) clear the top of Screen-Pro assembly. Once the adjustment is made, make sure the track is plumb and tighten all Bracket Anchor Plate Nuts.

At this point the Side Screens might need to be trimmed using scissors or a utility knife. The Screen should be 3" wider than the distance from the Guide Track to the wall. Carefully place the excess material against the wall, fold it toward the doorway opening and secure it with the supplied aluminum bar.

TIP: It is much easier to do this procedure when the security door is open.
With the Roll Ties still around the Roller Drum, place the Bearing side of the drum into the Drum Bracket Cradle.

With the Limit Adjustment Screws facing outward, place the nylon bushing over the bottom pin.

Insert the Motor Head into the Bracket.

On the right side, place a bolt with a nut through the Top Mounting Plate Hole to secure it to the Cradle.

At this point the Screen Roller Drum must be leveled. The Drum Bracket Mounting Bolts on one or both sides can be loosened and the drum can be accurately leveled.
**STEP 15**

Then carefully cut the Roll Ties without cutting the screen. Slip the bottom edge of the screen into the Guide Tracks. Place the leading edge in front of the Rubber Gasket to create a seal.

---

**STEP 16**

Next, the Screen-Pro should be fastened to the floor using the Floor Anchor Angles which were attached to the Bottom Track Braces (left & right) in Step 11. First, mark the holes. Second, drill the holes. Finally, place the screw anchors and secure with a lag screws.

---

**STEP 17**

**IMPORTANT**

- All electrical work should be performed in accordance with local and state building codes. If you are in doubt of proper wiring installation, we recommend acquiring the services of a certified electrician.

Next, the motor should be connected to a 120 v, 60 hz power source. The location of the Up/Down Switch is up to the installer but it should be convenient for the operator. Follow the wiring diagram to the right.
Set the up limit and the down limit. Use the supplied Black Plastic Tool to set the limits.

**Note:** The screw on top sets the “Down/Lower” limit. The switch on the bottom sets the “Up/Top” limit. Material should roll off the back side of barrel towards the wall.

**Important:** The large arrows on the far left of the drum by the limit adjustment screws refer to the drum rotation.

A. It is important to note that the arrows by the limit adjustment screw refer to the drum rotation. The door panel comes off the tube on the back side and the limit adjustment faces the front of the door assembly.

B. Turning an adjustment screw clockwise will increase the maximum travel in the direction that it controls, and turning it counterclockwise will decrease the maximum travel.

C. To set a limit, run the motor in the selected direction.

D. If the motor stops on its own before reaching the desired stop, turn the appropriate limit screw positive (clockwise). Every 3-4 turns of the limit adjustment screw equals approximately 1” of screen travel. After turning the limit adjustment screw, use the control switch to move the motor to the new limit position. **NOTE:** If the motor does not stop on its own before reaching the desired limit, go to Step F.

E. When you are approximately at the desired limit position, use the control switch to run the motor away from the limit, 2’ to 3’ and then back. This will allow you to see precisely where the limits are set. Make small adjustments if required.

F. If the motor does not stop on its own at least 6” before the desired limit position, stop the motor with the control switch. Then turn the adjustment screw counterclockwise (negative) direction. Confirm that the motor is at the limit and set the limit as per Steps D & E. If the motor has not stopped at the limit, continue turning the screw counterclockwise (up to 120 turns may be needed).

**NOTE:** The motor has a built in thermal cut-off. If after several minutes of use the motor will not run in either direction, allow the motor to cool for approximately 20 minutes before using again.

---
