

## ACCORDION STRIP DOORS

The **SAVE-T**® Accordion Strip Door is a unique design offered by TMI. It is used when obstructions on both sides of an opening, such as shelving or a wall, make the use of a sliding strip door impractical.

A light tug on the nylon pull-rope opens the accordion track, moving the strip door to one side or optionally bi-parting to both sides. This allows access for forklifts or hand trucks, allowing large equipment or fragile products to pass.

An accordion strip door is a great way to cut your heating or cooling costs by keeping environments separate.

### Features:

- Steel Wheel trolleys
- Galvanized steel Hardware
- Wall, Header or Bracket Mount
- Easy to Install
- Easy to Maintain

### Benefits:

- Cost Effective
- Convenient
- Maintains Temperatures
- Keeps Bugs Out
- Reduces Wear and Tear

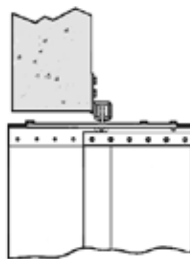

*Choice of opening style*

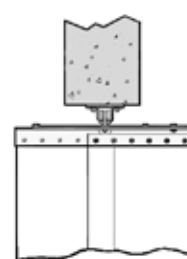

*Open from one side*

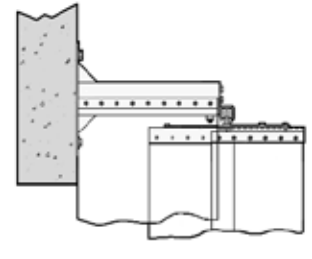

*Or open from middle*

*Wall Mount*

*Header Mount*

*Bracket Mount*
