

EXTRUDED PVC FROM VINYL SOLUTIONS:

SOMETIMES, IT'S WHAT YOU **DON'T** DO THAT'S IMPORTANT

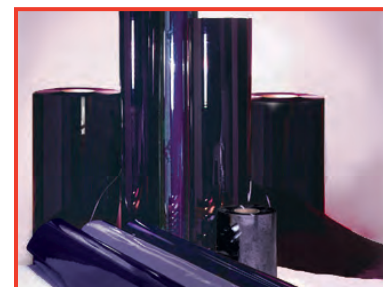

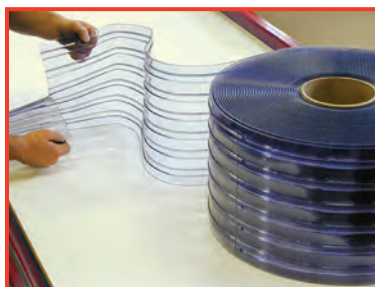

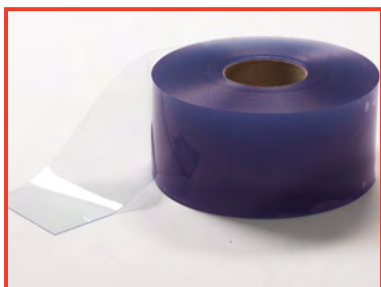

AMERICAN-MADE PVC FROM VINYL SOLUTIONS, a division of TMI, LLC, is unmatched in its quality, clarity and performance. At TMI, we control the process from “pellet to product” to ensure that the product you purchase is superior in every way. We also make every effort to eliminate the addition of harmful chemicals that many other companies include in their PVC.

AT VINYL SOLUTIONS, WE NEVER :

- **Add Tin Stabilizers** - Designed to improve heat stability, tin stabilizers permeate the PVC with a noxious, unpleasant odor.
- **Add DOPs** - DOP is a commonly used plasticizer and possible carcinogen.
- **Use Heavy Metals** - Heavy metals used during the extrusion process can leach out causing harm to the environment.

AT VINYL SOLUTIONS, WE ALWAYS :

- Produce the highest grade PVC in our U.S.-based extrusion lines
- Guarantee the satisfaction of our products with a limited warranty against manufacturer’s defects
- Oversee the entire process of our extruded PVC production to ensure superior quality

TMI, LLC ships from four locations across the United States to ensure the quickest transit times possible.
